Product Description TOYOPEARL chromatographic resins are based on a rigid methacrylic polymer, resulting in high mechanical and chemical stability. Resins are available as non-functionalized “HW” series resins for size exclusion separations, and derivatized with surface chemistries for alternative modes of chromatography such as ion exchange, hydrophobic interaction or affinity separations.

TOYOPEARL[®] AF-rProtein L-650F chromatographic resin is a functionalized support resin for affinity chromatography. The resin is prepared by multipoint attachment of a recombinant Protein L ligand onto TOYOPEARL HW-65F. TOYOPEARL AF-rProtein L-650F is useful for the chromatographic purification of immunoglobulins and their fragments at lab and process scale. The rProtein L ligand is not animal derived.
